

Can you find Series Pix #2

1. Moray Eel

Found on the bottom of the ocean in dark reef recesses or in sand. Snake like shape.

2. Tiger Shark

Cruises all waters as a solitary figure, has stripes and is considered the garbage can of the sea.

3. Triggerfish

Brightly colored with small teeth, 8-10 inches that inhabits and prowls low sections of outer reefs. Don't get too near a momma protecting its eggs, it can and will display some angry behavior.

4. Lobster

Family of large marine crustaceans burrows on the sea floor.

5. Big Eye Scad

Bright reflective silver fish that swims rapidly in large schools. Fished commercially, both for human consumption and for bait.

6. Porgy Fish (2)

Live in shallow temperate marine water, are bottom-dwelling carnivores and swim and hover around reefs.

7. Clown Fish

Have strips on their body and like to make their homes in anemones. Anemones protect the fish from intruders. They have a symbiotic relationship.

8. Brown Garden Eels (2)

Head and body extend from sand. They live in colonies. Very shy creatures.

9. Green Crab

Very invasive to all waters.

10. Sea shells lying on the reef (2)

Some are considered mollusks. The shell is used as their mobile home in the ocean.
